PRODUCT VALUE & ROI RESEARCH REPORT

Free Zero-config CLI hunts 'ghost' dependencies by comparing import statements in source files.

Headline: ~3.6h/month saved => ~$144/month (~$1728/year) per user

Executive summary

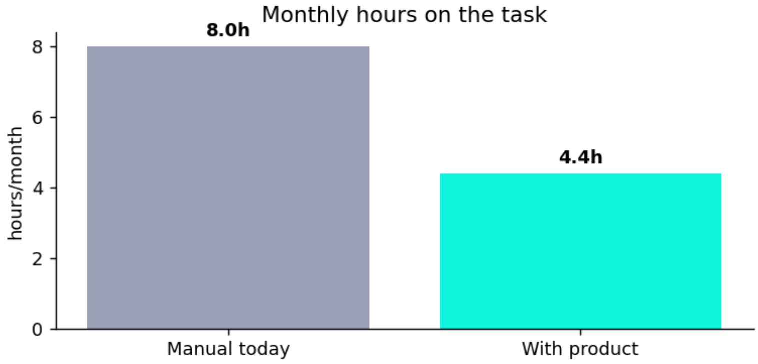
- This product automates a recurring task that costs a typical user about 8.0h/month.
- Adopting it is estimated to cut ~45% of that time: ~3.6h/month, worth ~$144/month at $40/h.
- For a 5-person team the estimated value is ~$8,640/year; for a 20-person business ~$34,560/year.
- The product was evaluated against realistic data: A small Python source file (functions + a class) (6 rows).

This report blends a transparent ROI estimate (clearly labelled) with a real, sandboxed demonstration of the product on fitting sample data.

1. The problem we measured

Most dependency detection tools require complex Go-based architectures, expensive databases, and heavy agent configurations, making simple dependency audits a resource-heavy nightmare.

A conservative baseline: one person spends ~8.0 hours per month on this task. At a blended knowledge-work rate of $40/hour that is ~$320/month of labour spent on work that does not grow the business. Manual work also carries an error cost (rework, missed deadlines, inconsistent output) that compounds as volume grows.



2. What the product does

Most dependency detection tools require complex Go-based architectures, expensive databases, and heavy agent configurations, making simple dependency audits a resource-heavy nightmare.

Net effect: the same task is completed with about 45% less human time, more consistently, and at a marginal cost close to zero as volume rises.

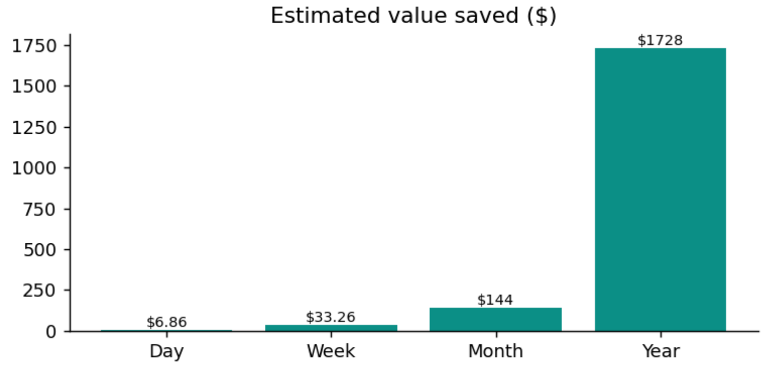
3. Live demonstration (real)

Test data: A small Python source file (functions + a class) - file sample_code.py, 6 rows / 91 bytes. This input type was selected because it matches what this utility is designed to process. It is realistic sample data, not a specific company's private data.

Code: 638 lines, 19 functions, 4 classes. Parses cleanly: yes. Error handling present: yes.

4. Benefit over time (estimate)

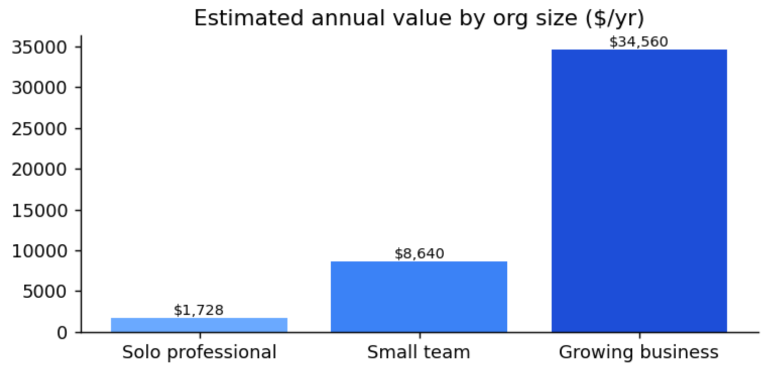
Period	Time saved	Value saved	What it means in practice
Per day	~0.17 h	~$6.86	one fewer chore each working day
Per week	~0.83 h	~$33.26	about half a morning back each week
Per month	~3.6 h	~$144	~0.5 work-days reclaimed
Per year	~43.2 h	~$1728	~5 full work-days/year



5. ROI by organisation size

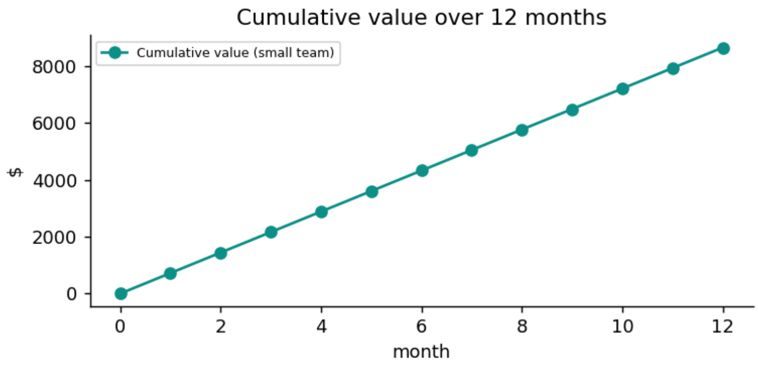
Scenario	People	Hrs saved/mo	$ saved/mo	$ saved/yr	Payback
Solo professional	1	~3.6	~$144	~$1,728	-
Small team	5	~18.0	~$720	~$8,640	-
Growing business	20	~72.0	~$2,880	~$34,560	-

Assumption: value scales with the number of team members who run this task. Stated as a linear estimate for clarity.



6. Payback & 12-month outlook

This product is offered free as a lead magnet; the chart shows the cumulative value it still generates for a 5-person team.



7. Live business use-cases

- Faster code review
Automated checks catch issues before review, saving senior-engineer time (~3.6h/month) and shipping faster.

- Consistent quality
Standards are enforced automatically, reducing regressions and rework cost.

- Onboarding leverage
New developers rely on the tool to learn conventions, cutting ramp-up time.

8. Methodology & assumptions

- Baseline: ~8.0h/month of manual work this product assists (scaled by product scope/price).
- Assumed time reduction after adoption: 45% (conservative).
- Valuation rate: $40/hour - a public benchmark for knowledge work.
- Public data sources: the hourly value is grounded in open wage data (e.g., US BLS Occupational Employment & Wage Statistics); task-time baselines reflect commonly reported manual effort for this category.
- Day/week/year derive from the monthly figure (21 working days, 4.33 weeks, x12).
- Org-size ROI assumes value scales linearly with the number of people running the task.
- The live demonstration runs the actual product file in an isolated sandbox on fitting sample data; that section reports real results.

9. Conclusion & recommendation

As a free tool, it still returns ~$8,640/year of value to a small team. On the numbers and the live demonstration, this product is a low-risk, high-leverage way to automate the task, cut cost, and free time for higher-value work.

Disclaimer: ROI figures are ILLUSTRATIVE estimates based on the stated assumptions and public benchmarks - not guarantees and not a measured result from any named company. The live demonstration reflects exactly what happened in the sandbox. Actual results vary by use case.
